SUMMARY

Software Engineer with 10 months of experience building production-grade, cloud-native systems at CONSAT ORAHI. Skilled in Java, Spring Boot (WebFlux), Python, React.js, Kafka, Redis, gRPC, Docker, and Kubernetes. Built GenAI-powered applications with RAG/LLM integration and MCP server frameworks using FastMCP. Strong foundation in DSA, distributed systems, and cloud-native development with LeetCode rating **1730** and Codeforces rating **1168**.

EDUCATION

- GLA University, Mathura, Uttar Pradesh** August 2022 - May 2026
Bachelor Of Technology **CPI: 8.31**
- Pt. Deen Dayal Upadhyaya Sanatan Dharma Vidyalaya, Kanpur** March 2022
Secondary Education **Grade: 81.6%**

WORK EXPERIENCE

- Consat Orah** November 2025 – Present
 - Associate Software Engineer | Project: Airlinq eSIM Fleet Orchestrator**
Technologies used: [Java 21, Spring Boot (WebFlux), gRPC, Kafka, Redis, PostgreSQL, Keycloak, Docker, Kubernetes]
 - Designed and delivered a cloud-native eSIM orchestration platform to manage the complete eSIM lifecycle (download, enable, disable, delete, switch) for large-scale IoT vehicle fleets.
 - Built an event-driven microservices architecture with Kafka-based asynchronous workflows, ensuring non-blocking order processing, reliable retries, and high throughput (100k+ operations/day).
 - Developed a Business Rule Engine (BRE) using gRPC (reactive) to evaluate triggers, conditions, and actions in under 500ms, enabling automated profile switching based on country, operator, signal, and device events.
 - Implemented Redis-based state caching and idempotency control to handle real-time order tracking, prevent duplicate execution, and support high-concurrency processing per EID/ICCID.
 - Designed an audit-first architecture with immutable logs, correlation IDs, and role-based access control (RBAC), ensuring full traceability, GDPR compliance, and enterprise-grade observability.
 - Associate Software Engineer | Project: KAI – LLM Agent & MCP Server Framework**
Technologies used: [Python, FastAPI, FastMCP, AutoGen, React.js, Keycloak, PostgreSQL, Docker, Kubernetes]
 - Spearheaded the core MCP server using FastMCP, exposing tools across GitLab, Jira, Outlook and Neo4j enabling LLM agents to securely interact with enterprise systems.
 - Developed a multi-tenant RBAC system on Keycloak, including tenant/subtenant management, invitation workflows, and audit logging for organizations, roles, and permissions.
 - Built the Connectors module in React.js, enabling OAuth2/PAT-based provider integrations at org and user levels with automated token lifecycle management.
 - Extended SQL execution and S3 file-read MCP tools, and added multi-document processing with configurable retry logic to the agent workflow execution engine.
- Ticket Boleto: Real-Time Ticket Booking Website** Oct 2024 – Feb 2025
Technologies used: [MongoDB, Express, Node.js, React.js] [Ticket Boleto-live](#) [GitHub](#)
 - Created a ticket booking website for concerts, sports events, and movies with concurrency handling to prevent overbooking.
 - Implemented JWT authentication and Google OAuth, reducing login time by 30% and improving session security, resulting in zero unauthorized access incidents during testing.
 - Integrated a secure payment gateway, extensively tested to reduce transaction failures by 15%, ensuring smoother and more reliable payments in a potential live environment.

SKILLS

- Programming Languages:** Java, Python, JavaScript, C
- Backend & Frameworks:** Spring Boot, gRPC, REST APIs, Node.js, Express.js, FastMCP
- Web Technologies:** HTML5, CSS3, JavaScript, React.js, Bootstrap
- GenAI & AI:** RAG, LLM Integration, Prompt Engineering, Vector Databases, MCP (Model Context Protocol)
- Database:** PostgreSQL, MySQL, MongoDB, Redis
- Messaging & Streaming:** Apache Kafka
- Security & Auth:** Keycloak, OAuth2, JWT, RBAC
- DevOps & Cloud:** Docker, Kubernetes, Jenkins
- Tools:** Git, GitHub, Gitlab, Postman, IntelliJ, Visual Studio Code
- Concepts:** Agile Methodologies, Object-Oriented Programming (OOP), SOLID Principles

CERTIFICATES & ACHIEVEMENTS

- Solved 300+ data-structure tasks with a 90% acceptance rate, culminating in a feature on the [W3Grads leaderboard](#).
- Achieved a maximum contest ranking of **1168** on Codeforces and **1730** on LeetCode.
- Solved **800+** questions on various platforms.
- HackerRank certified and 5-Star holder in C, Python and Java.
